

In the Abstract

Please amend the ABSTRACT OF THE DISCLOSURE of this application as follows:

1 ~~--This invention is a technique of image data processing.~~ An
2 image data processing system and method are disclosed in which
3 image data is organized for fast and efficient transfer of image
4 data to and from an image memory using a tile cache. Image data is
5 stored in a memory having data words of a predetermined data width.
6 Each data word includes a plural adjacently disposed image pixels
B 7 of a single scan line. A set of consecutive data words corresponds
8 to a two dimensional tile of the image whereby adjacent data words
9 store image pixels of adjacent scan lines. The image data is
10 transferred to a tile cache in these tiles. Following image
11 processing on a tile of image data stored in the tile cache, the
12 tile of image data is transferred back to the memory. The
13 technique repeats for each tile of image data. Separate tiles of
14 image data may be operated on by different data processors
15 simultaneously.--
